

IN PARTNERSHIP WITH PLYMOUTH UNIVERSITY

Name: M W M Y K DHARMATHILAKA

Student Reference Number: 10953226

Module Code: PUSL2023	Module Name: Mobile Application Development
Coursework Title: Project Proposal	
Deadline Date: 14 th Feb 2025	Member of staff responsible for coursework: Mr. Diluka
Programme: BsC (Hons) Software Engineering	
Please note that University Academic Regulations are available under Rules and Regulations on the University website www.plymouth.ac.uk/studenthandbook .	
Group work: please list all names of all participants formally associated with this work and state whether the work was undertaken alone or as part of a team. Please note you may be required to identify individual responsibility for component parts. <i>We confirm that we have read and understood the Plymouth University regulations relating to Assessment Offences and that we are aware of the possible penalties for any breach of these regulations. We confirm that this is the independent work of the group.</i> Signed on behalf of the group: 	
Individual assignment: <i>I confirm that I have read and understood the Plymouth University regulations relating to Assessment Offences and that I am aware of the possible penalties for any breach of these regulations. I confirm that this is my own independent work.</i> Signed :	
Use of translation software: failure to declare that translation software or a similar writing aid has been used will be treated as an assessment offence. I *have used/not used translation software. If used, please state name of Software

Smart Closet Inventory Management Application

Problem Statement

A gap was identified in the mobile application market that caters to a set of features that help a day-to-day person manage their closet. The main objective of the project is to put together a set of features that inter operate to create a frictionless laundry and closet experience.

Scope

The project aims to develop a cross-platform mobile application that provides a seamless experience for users to plan and manage their closet inventory. The application will be available on iOS and Android devices, ensuring accessibility across various smartphones and tablets.

Features

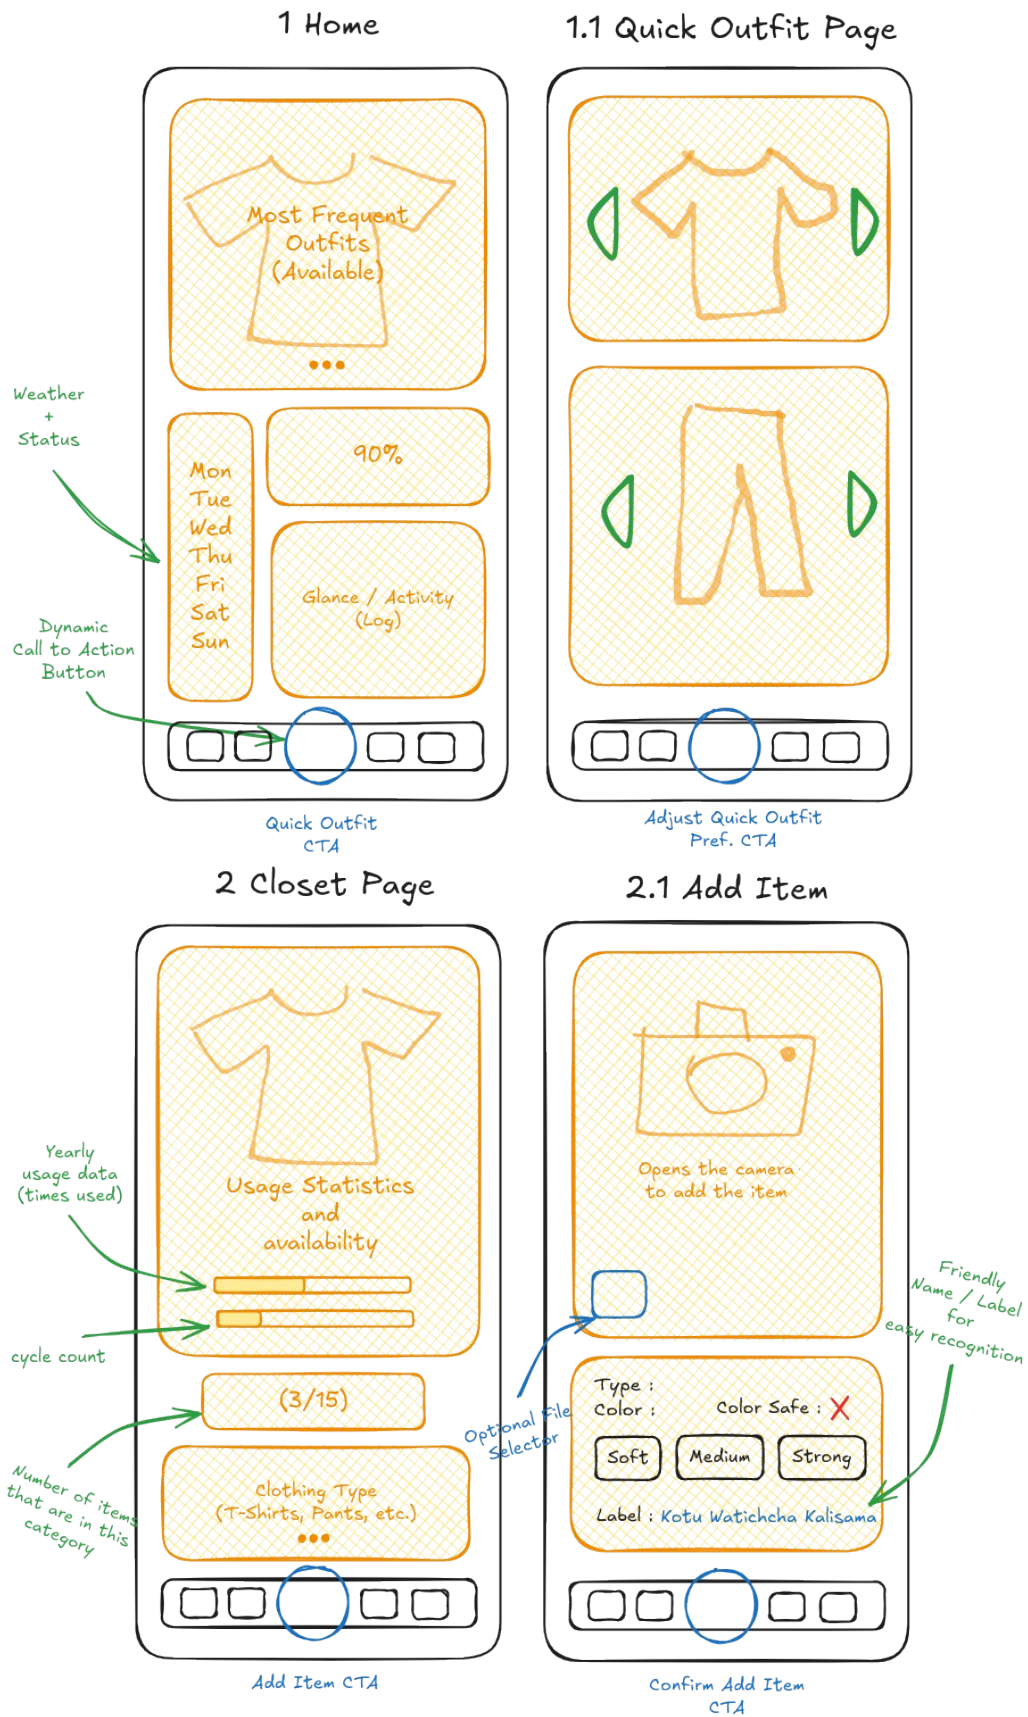

The goal of the application is to keep track of clothing items in a closet. Apart from the main feature the app will supplement it by having features to,

1. Closet Items and Outfits
 - a. An item is considered a typical clothing item. It can be a Shirt, T-Shirt etc.
 - b. Entering items into the system can be done manually or with machine learning assistance (image recognition to recognize an item and its physical properties like color)
 - c. Their availability (whether the user wore the item, or is pending a wash / dry) is kept in record
 - d. An outfit considered one or more items paired.
 - e. Outfits can be generated with machine learning. User's preference to color choices will be accounted for.
 - f. Current outfits can be quickly accessed. (when the user decides to go out for example) The outfits that cannot be paired when an Item is unavailable will not show up in this quick menu.
2. Closet Calendar
 - a. Factors like weather, type of the item's material in the laundry basket, color and if it is safe to mix and wash with other colored items in the basket will be accounted for.
 - b. Considering the factors, a smart calendar marking the days to do laundry.
 - c. The calendar will also display outfits distributed evenly across the timeline while mixing and matching to keep the vividness of the user's appearance.

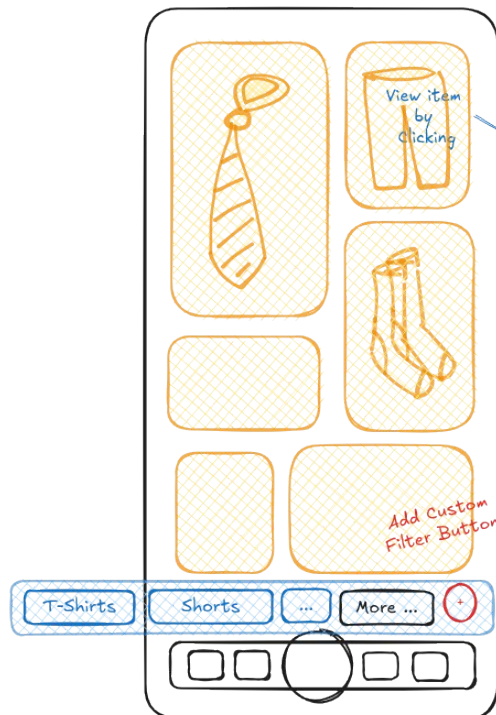

- d. The user's regular outfit patterns (for example a user working 5 days a week wearing formal wear) used to determine the above said distributing (c).
- 3. More Quality-of-Life Features
 - a. Notifications to remind dates from the Calander
 - b. Notifications prompting the user if they forgot to track an outfit for the day (on a day where the system is certain about the user's activity ex: on a working day)
 - c. Activity log showing all the activities, where an activity can be the user registering an item/outfit, wearing an item/outfit, doing the laundry etc.
 - d. Simple and Frictionless UI/UX. The application will heavily consider the UX side to make this less cumbersome for an individual.

Wireframe

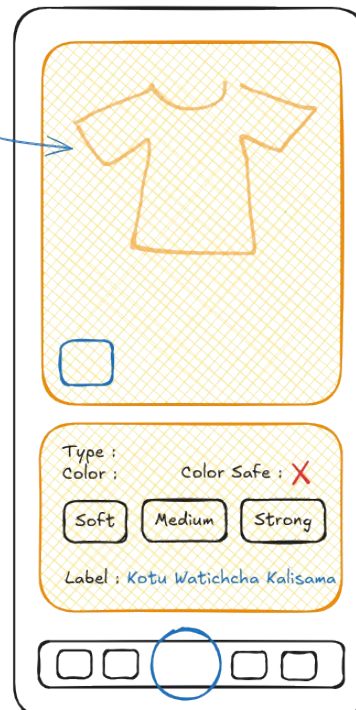

These wireframes are digitally maintained and were derived to be embedded in a 4-page pdf. All the UI frames are not included due to limited space. They may be subjected to change with development revisions to improve UI/UX. The maintained version can be viewed [here](#). Please view the maintained version online for a better insight.
